

ibm_phoenix, 10-02, $d = 3$: the three frames against depth (line colour: the patch's memory rank, dark = lowest P_L), and the logical error probability after $R = 3$ rounds with the patches in the order each frame ranks them (numbers: the memory's own rank)

Z frame

X frame

XZ frame

sorted by the Z frame: $\rho = 0.70$, mean shift 2.0

sorted by the X frame: $\rho = 0.77$, mean shift 1.5

sorted by the XZ frame: $\rho = 0.87$, mean shift 1.1
